

A short sample document for the **alttex** package

Arno L. Trautmann*

December 29, 2008

This document shows applications of the possibilities the **alttex** packages offers for writing code in \LaTeX .

There are three columns: The left one shows the input code using **alttex**, the middle one shows the corresponding "normal" input, and on the right-hand side there is the output of that code. The output is written in the code on the left-hand side, so I am not cheating here...

unicode math

`\int_{-\infty}^{\infty}`

`\int_{-\infty}^{\infty}`

$$\int_{-\infty}^{\infty}$$

itemize

A short sample text

- first item
 - second item
 - deeper item
 - second deeper item
- `\end{itemize}`
`\end{itemize}`

A short sample text

```
\begin{itemize}
\item first item
\item second item
\begin{itemize}
\item deeper item
\item second deeper item
\end{itemize}
\end{itemize}
```

A short sample text

- first item
- second item
 - deeper item
 - second deeper item
